MiaSolé Announces Commercial Shipments to Multiple Customers

SANTA CLARA, Calif.--([BUSINESS WIRE](#))--MiaSolé, the emerging leader in the manufacture of CIGS thin-film photovoltaic modules, is pleased to announce that it has started shipping its CIGS thin-film modules from its California production facility.

“We have now shipped modules to 30 customer sites in Germany, Italy, Spain, France, Portugal and various locations in the United States; we now have commercial projects in the ground, under development and on the drawing board,” said Dr. Joseph Laia, Chief Executive Officer. “With complete UL/IEC certification and long-standing customer partnerships, we are now ramping our factory output and production capacity for 2010. We are confident our cost structure and manufacturing efficiencies will enable us to compete effectively in the large and growing solar energy market.”

About MiaSolé

California-based MiaSolé manufactures solar panels utilizing the thin-film copper indium gallium diselenide (CIGS) semiconductor. The company’s goal is to enable grid parity solar energy through high-volume manufacturing of low cost, high-efficiency thin-film solar modules.
